

ROBLOX

Parental controls and Family Pairing, step by step

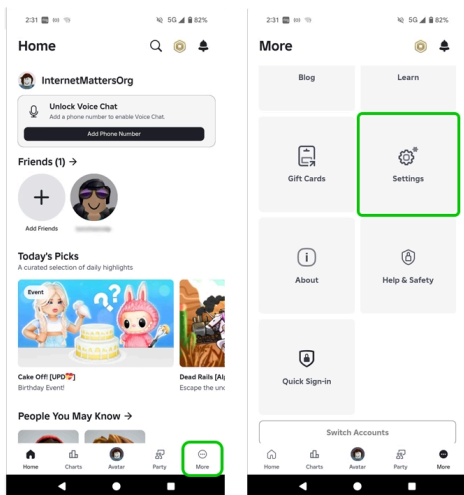

This links your own Roblox account to your child's, then sets content limits and turns off chat with strangers. Roblox calls the link Family Pairing. About ten minutes, completely free, and the game still works when you are done.

BEFORE YOU START

You need two things: a Roblox account of your own (free at roblox.com, takes two minutes) and your child's account in hand. Roblox will ask you to prove you are an adult with a credit card or government ID. That is normal, and it is the point: the same wall that slows you down tonight is the wall between a stranger and your kid. The link request expires in 24 hours, so do the whole guide in one sitting. In the pictures, the green box shows where to tap.

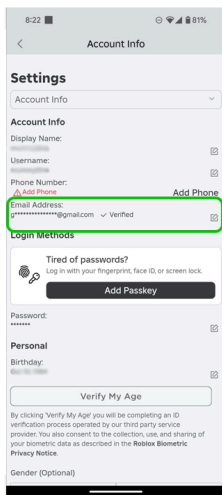

Layer 1 of the Castle Model, the controls inside each game and console.

GET YOUR PARENT ACCOUNT READY

STEP 1

On your own phone, open Roblox, tap More, then Settings.

STEP 2

In Account Info, make sure your email address is verified.

ROBLOX

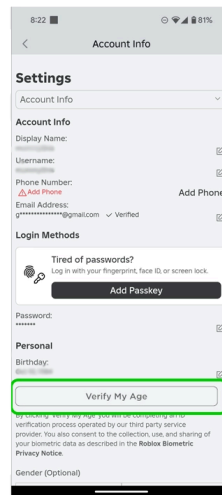

Roblox Email Verification

Hello,
Thanks for choosing to secure your Roblox account **InternetMattersOrg** by providing an email address.

If you submitted this request, please click the button below to complete the verification process:

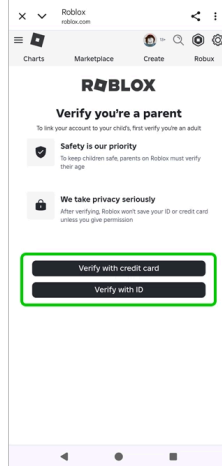

Verify Email

Thank You,
The Roblox Team

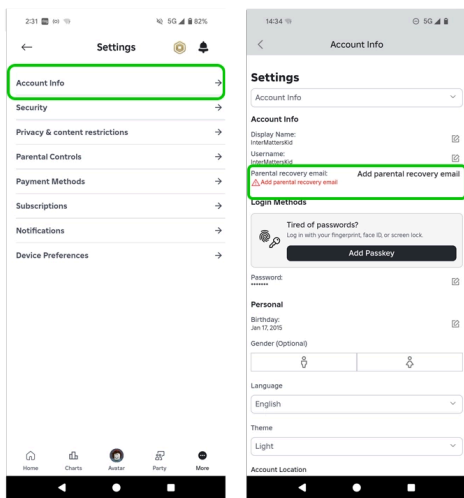

STEP 3

Tap Verify My Age. Credit card or government ID, about a minute. Roblox requires this before it hands you the controls.

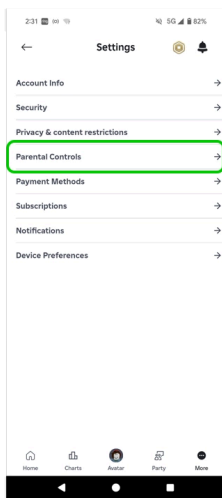

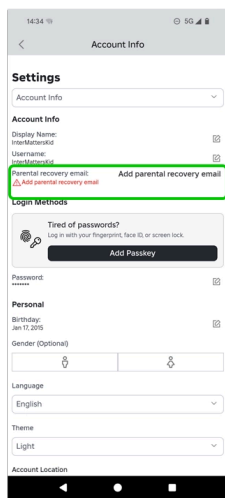

LINK TO YOUR CHILD

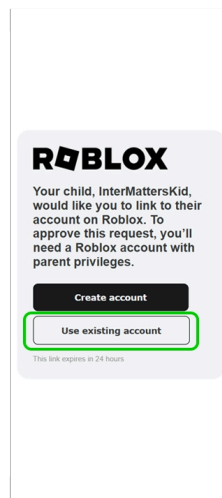

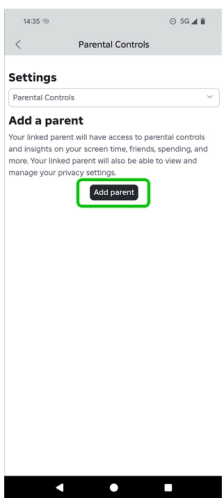

STEP 4

Now on your child's account: Settings, Account Info, and add your email as the parental recovery email.

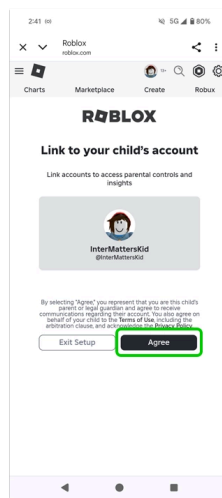

STEP 5

Still on their account: Settings, Parental Controls, tap Add Parent.

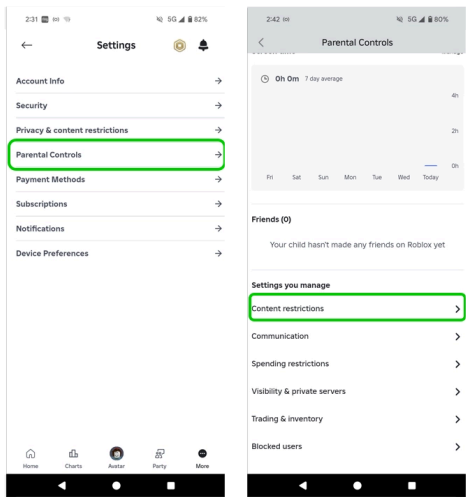

STEP 6

Approve the link from your own account. It expires in 24 hours, so do both halves in one sitting.

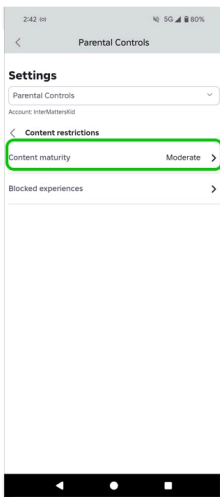

SET THE CONTROLS

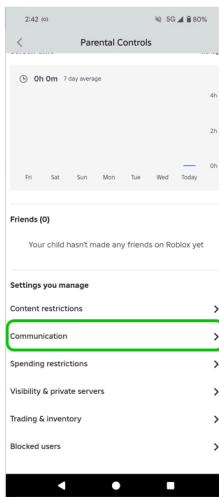

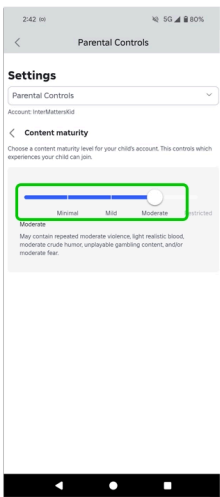

STEP 7

Back on your account you now have a dashboard: screen time, friends, and the settings you manage. Tap Content Restrictions.

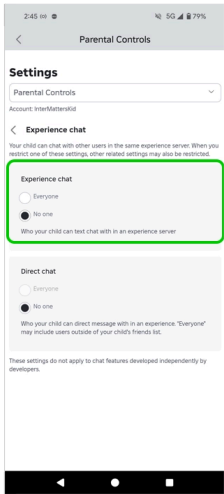

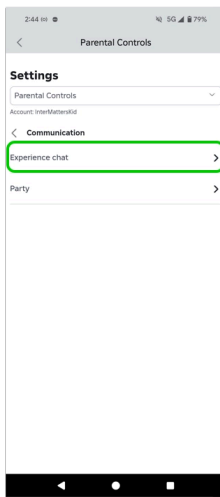

STEP 8

Set Content Maturity to match your child's age. For ages 5 to 8 use Minimal. For 9 to 12, Mild is plenty.

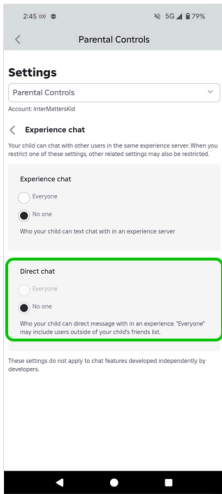

STEP 9

Open Communication settings.

STEP 10

Set Experience chat and Direct chat to No one. This is the setting that stops stranger contact. The game still works.

That is Roblox done. Your account now manages your child's: content matched to their age, and no strangers in their chat. The game still works.

WHAT THIS CATCHES, AND WHAT IT DOES NOT

These controls cover Roblox on every device your child plays it on: phone, tablet, console, or computer. They do not control how long the game is played, set that on the device or console, our Screen Time and Nintendo Switch guides cover it. One more note: in April 2026 Roblox introduced age categories, Roblox Kids for ages 5 to 8 and Roblox Select for 9 to 15, so your screens may look slightly newer than these pictures. The path is the same: Settings, then Parental Controls.

CHECK IT WORKED

From your child's account, try to chat with an account that is not a friend: it should be blocked. Then check your own phone: the parent dashboard should show their screen time and friends list.

KEEP GOING

This is one layer of five. If your child also plays Fortnite or has a Switch, those guides take ten more minutes between them. And put the Safe Family Internet decal in your window so other families know they are not doing this alone.
